An Update on COVID-19 in Chile

More than 51.5 million vaccines have been administered, with 91.9% of the target population completing the process (84.8% in the population under 18 years and 93.6% in the population over 18 years). Chile stands out for being the country with the largest share of population vaccinated with booster doses, reaching 87 per 100 inhabitants. In total, 13.8 million booster doses have been administered. Chile has begun the 4th dose vaccination process for people over 18 years old.

From April 14, 2022, the Chilean government updated the plan step by step, considering three types of health impact phases: low, medium and high. Along with this, and considering the high level of vaccination and the controlled health situation, restrictions on the opening of borders have been relaxed.
