² Returns for periods of more than one year are compound annualized rates while those for less than a year correspond to the change as seen in the stated period. To meet high standards of transparency and provide a better assessment of the gains or losses on investments, the Ministry of Finance discloses the fund's return in different time horizons and currencies. Concerning the time horizon, it is important to note that, in keeping with the medium-and long-term investment policy, the return assessment should focus on that period, disregarding fluctuations that may occur monthly or quarterly. Regarding returns expressed in different currencies, the return in US dollars allows for an assessment that is more in line with the investment policy given that the fund's resources are wholly invested abroad and in foreign currencies. The return in Chilean pesos is also disclosed. This return reflects changes in the peso-dollar exchange rate and, therefore, may experience greater fluctuations. Finally, as with any investment, returns obtained in the past do not guarantee future positive results.
